

UNF VPN Client Setup:

Note: Duo Security Required for use of VPN. Information on registering can be found at this link

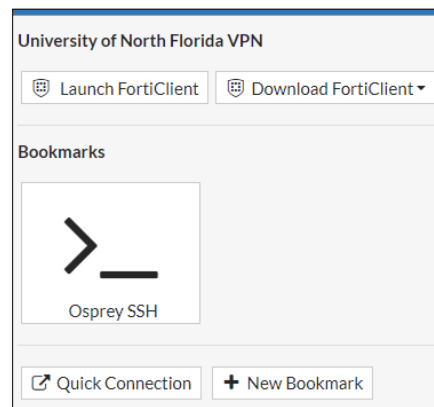

<https://www.unf.edu/its/2FA/2FA-registration.aspx>

- Go to the link below and sign in with your N# & password. When prompted with the Duo Security page accept the mobile push and you will be logged in.

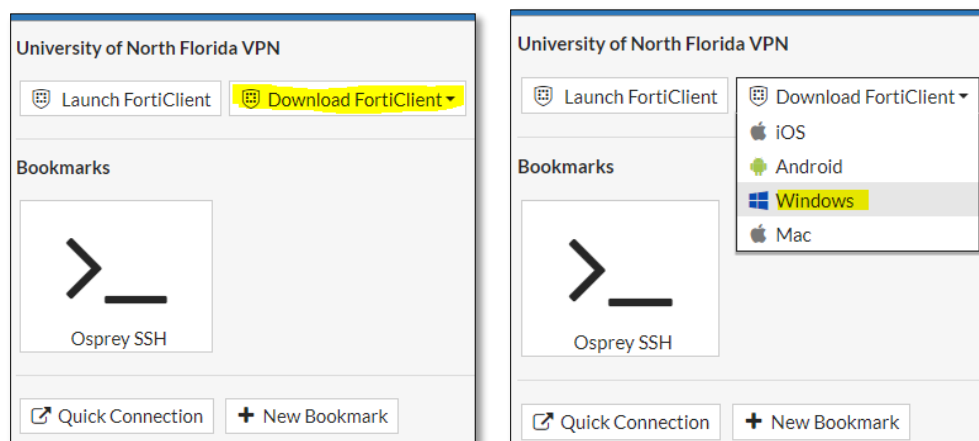

VPN Link: <https://vpn.unf.edu/>

- You are now connected to a VPN web session. From this page you can connect to UNF servers via the browser interface or download the local VPN client.

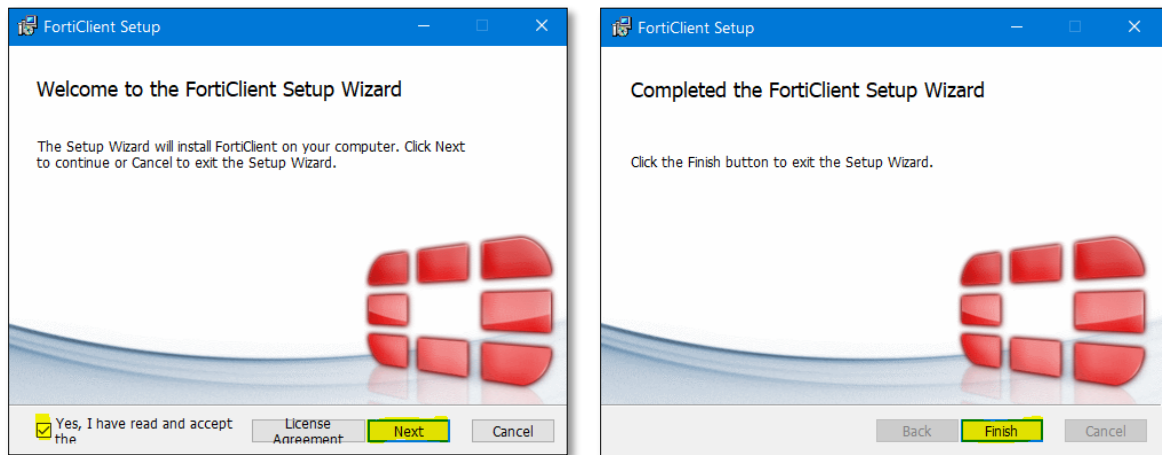

- To download the client, click the “Download FortiClient” & select the link for your corresponding OS.

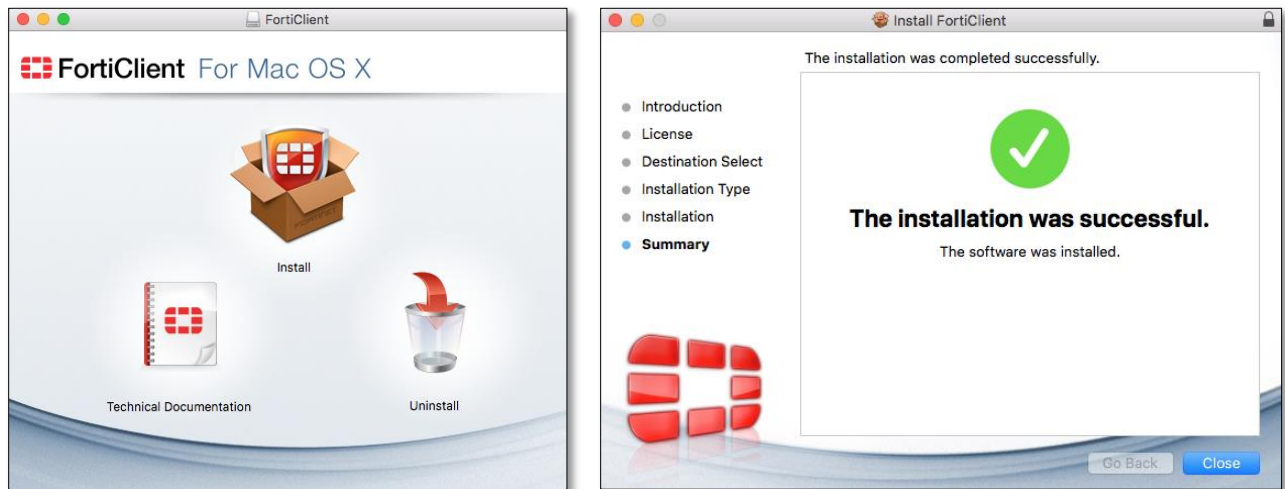

- Once the client downloads run the installer & follow along with the prompts.

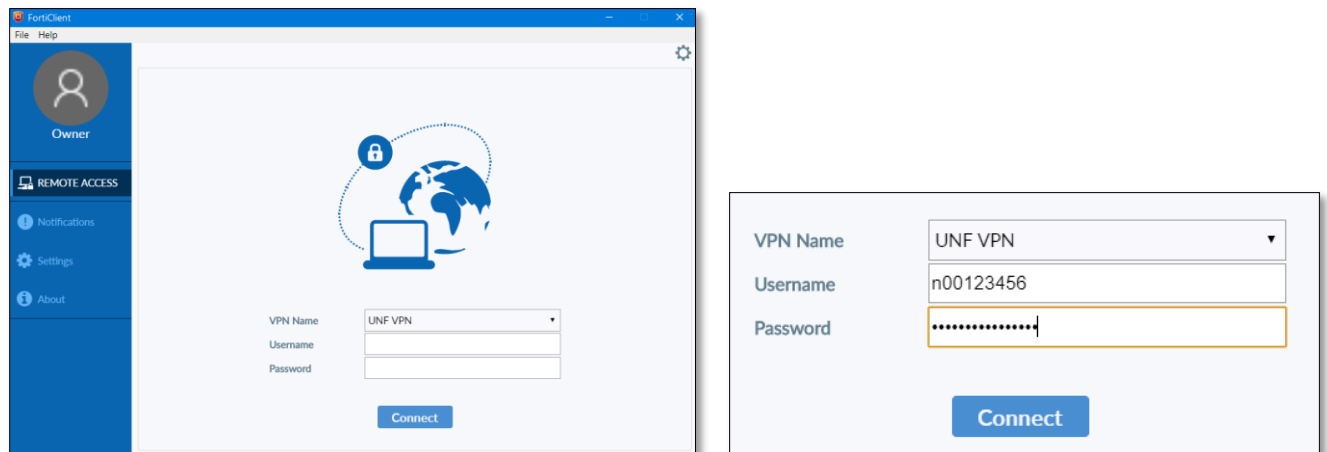

Windows:

Mac:

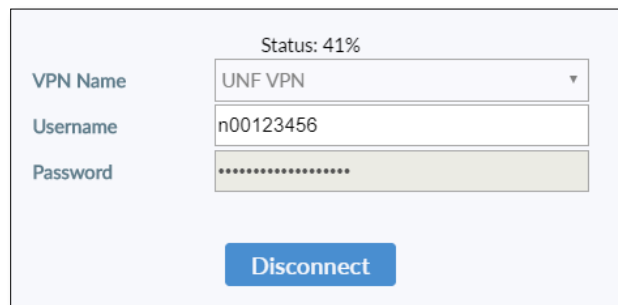

- Launch the FortiClient application. Enter your N# & password then click “Connect”.

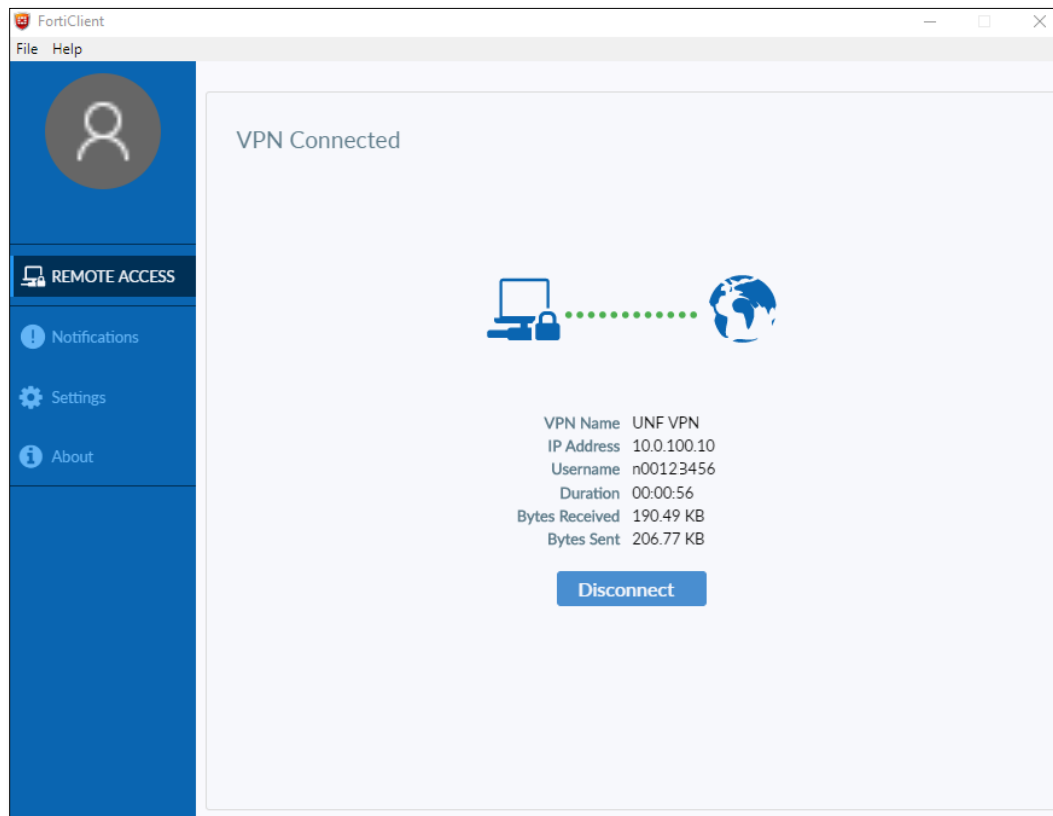

- A Duo push will be sent to your default Duo Security device. The client will pause around 40% & will not connect until the Duo push is accepted.

Note: The FortiClient does not prompt you to accept the Duo push & will time out if the push is not accepted. This will cause an error “Unable to logon to the server. Your credentials may not be configured properly”.

A login dialog box for FortiClient. At the top, it says "Status: 41%". Below this are three input fields: "VPN Name" with a dropdown menu showing "UNF VPN", "Username" with the text "n00123456", and "Password" with a masked field of dots. At the bottom is a blue button labeled "Disconnect".

- The following screen will be displayed in the FortiClient when the connection has been made successfully.

Note: Once connected to the VPN your device is given a new IP address & all internet traffic goes through the UNF network. Keep this in mind while using the VPN & make sure to disconnect from the VPN once you have completed your work.
